

City of Kelowna Official Community Plan

Client: City of Kelowna

General Location: Kelowna, CA

As part of an initiative for sustainable planning, the update for the Kelowna Official Community Plan involved preparing a Sustainable Communities Strategy to illustrate four potential future development alternatives. Placeways modeled the four future plans using CommunityViz and a customized development allocation tool. Each scenario was analyzed and scored on measures for economic, social, environmental, transportation, health and wellness, water, community and cultural impacts. Scenarios were presented and refined through a series of workshops and public meetings. Based on the results of the scenarios and feedback from stakeholders, the public and city staff, a land use plan was prepared, bringing together the best aspects of the alternatives.
