

Project Snapshot

SANDAG Healthy Works Program

Health Impact Assessment Modeling Using CommunityViz

Client: San Diego Association of Governments (SANDAG)

General Location: San Diego, CA

The County of San Diego Health and Human Services Agency's Healthy Works program is aimed at reducing chronic disease through policy, environmental, and organizational changes. They asked Placeways to use CommunityViz to help with their Health Impact Assessment (HIA) in an initiative to integrate health considerations into regional land use and transportation decision making. Placeways' CommunityViz analyses used statistically established models from Urban Design 4 Health (UD4H) to estimate the impact of land use changes and changes to food locations based on different health-related indicators.
